

Consider this: The human brain can process roughly 10,000 different smells in an area the size of the postage stamp. Because the human sense of smell is often linked to memory, many high-traffic public-facing businesses make it a priority to combat malodor and create a better air care environment throughout their facilities. Restrooms are no exception.

There's no easy way to put it – a shared restroom can be a foul-smelling room. This is where an air purifier excels. No matter the cause, and especially if you have a busy restroom, an air purifier is an excellent solution to ensure your small or large restroom remains in a constant state of freshness.

Whether it's aerosol sprays, strong-smelling cleaning products such as bleach, bacteria on fixtures, human-caused odors, or other common airborne pollutants, the air in your restroom must be healthy and clean — especially for those with compromised immune systems. Restrooms are a haven for germs and bacteria. What's more, 64% of Americans will think twice about patronizing an establishment after an unpleasant restroom experience.

### ARE YOU CLEANING EVERYTHING?

Beyond the most common surfaces and touchpoints, public expectations also include cleaning the air

COVID-19 has made the public's expectations for restroom cleanliness paramount. However, according to the 2021 CMM In-House/Facility Management Survey, restrooms are the most problematic areas to clean and maintain in a building. As they are high-traffic areas with the largest germ count, cleaning and maintaining restrooms should be a priority for most building managers.

According to the 2021 CMM survey\*, more than 70% of people felt unsafe using a public restroom during COVID-19 due to hygiene concerns. However, another 80% say they expect a cleaner environment now more than ever.

Facilities managers expect stringent cleaning controls beyond surfaces will continue to be implemented. This includes protocols for cleaning the air. Adding an air purifier to the bathroom can drastically reduce the number of pathogens, viruses, and bacteria in the air.

### A REAL-WORLD CASE STUDY AT QUAKER STEAK & LUBE

Fellowes partnered with Quaker Steak & Lube in Clearwater, Florida, to test the impact of the AeraMax Pro AM3 PC commercial grade air purifier in reducing and maintaining PM2.5 levels in their men's and women's restrooms.

During this study an observable reduction of PM2.5 in the Men's and Women's restrooms was made when the Fellowes Air Purification AM3 PC devices were operational.

Only Fellowes® AeraMax® Air Purifiers sense & react to changes in air quality and occupancy while showing you the air is clean. Utilizing True HEPA filtration eliminates the spread of viruses, but also eliminates odors.

This patented sensor technology and display makes the invisible visible with real time status updates as the air is cleaned. It provides maximum peace of mind that the air your

students and staff breathe is clean.

Fellowes' proprietary and patented EnviroSmart Technology enables AeraMax Pro air purifiers to continuously monitor your environment and automatically adjust to clean the air, conserve energy and reduce operating costs.
