Find out how AeraMax® Pro air purifiers help provide a law firm with clean air

VBV Advocaten

Location: Ermelo, The Netherlands.

The problem

Van Bloemendaal & Verweij Advocaten offer legal assistance in the field of employment law, corporate law, personal law and family law. A number of lawyers work in the office in Ermelo and meet with clients on site. There are areas in the office where the windows cannot be opened, which gave the feeling that the air was being insufficiently cleaned. There was a central ventilation system, but there were doubts as to whether this was sufficient, so additional measures were sought to clean the air. All the more so because there were also complaints from employees about headaches.

The solution

An air measurement was taken by Wuestman and Fellowes to measure the number of contaminated particles in the air and demonstrate the effectiveness of the air purifiers. Half an hour after using the AeraMax Pro, the number of contaminating particles was greatly reduced.

A total of 7 AeraMax Pro units were installed. These units being installed will mean that the air is cleaned of viruses, bacteria, allergens and VOCs up to 5 times per hour by the AeraMax Pro 4-stage filtration system. AeraMax Pro even removes 99.99% of the COVID-19 virus†.

'With the air purifiers we can protect our people and provide a safe environment with clean air'

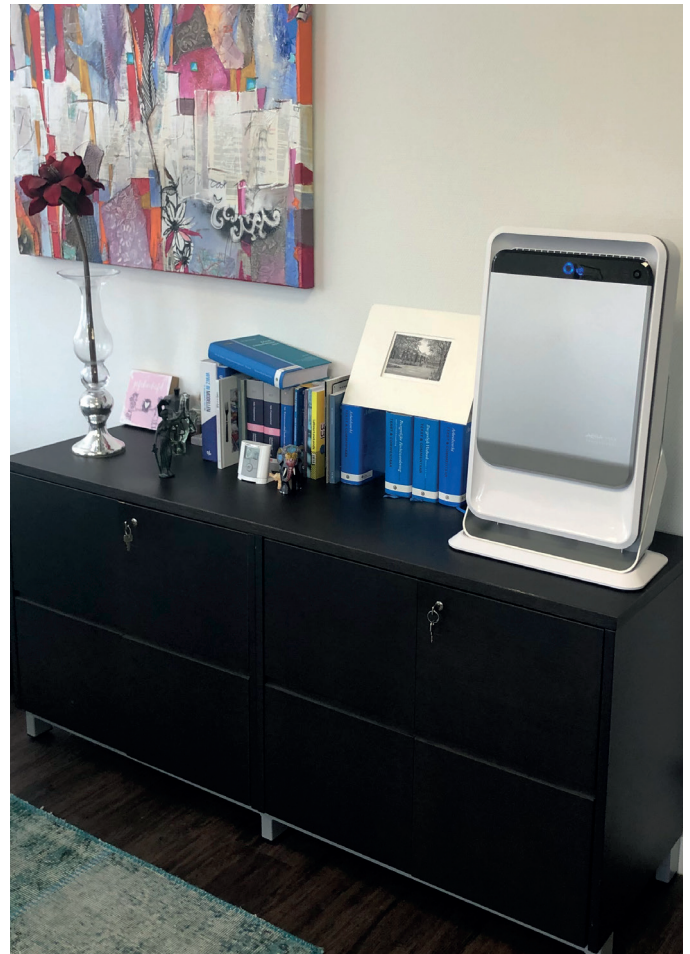

Annemarie de Fauw – Office Manager

Fellowes
AIR PURIFIERS

The result

Despite the fact that clean air is not immediately noticeable, VBV Advocaten certainly noticed an improvement after a few weeks. **'The number of complaints that there are about headaches has certainly improved with the help of AeraMax. In addition we also notice that we suffer less from dry eyes at the end of the day', says Annemarie de Fauw, Office Manager at VBV lawyers.**

In addition, the quiet mode is considered a great advantage. 'At first we didn't know how this mode worked and the device made noise, but using the quiet mode limits the number of decibels, which is useful if we have clients in the room, for example. We are very pleased with the collaboration with Paul van de Ven from Fellowes and Cor Remmers from Wuestman and the use of AeraMax Pro.'

† All Fellowes AeraMax Pro air purifiers demonstrated, through independent laboratory testing, to be effective in eliminating aerosolized concentration of SARS-CoV-2 by 99.9999% through a single air pass test of the purifier. In addition, in a separate test, AeraMax Pro air purifiers achieved a 99.99% reduction in a surrogate Human Coronavirus 229E in a 20m³ test chamber within 1 hour of use.
