

ADDED PROTECTION FOR INNOVATIVE WELLNESS SOLUTIONS

PROVEN AND EFFECTIVE PROTECTION FOR CLEANER PRODUCTS

Fellowes® has teamed up with Microban® to include specially formulated antimicrobial protection in select products. This added layer of protection is integrated into Fellowes products at the point of manufacture to help prevent the growth of bacteria, keeping the products cleaner for longer. The technology remains active 24/7 for the life of the products, so users can worry less and focus on the job at hand.

Companies taking an active approach to improve employee wellness are looking for products that lead to a cleaner, more productive work environment. Products that include an added defense against the growth of bacteria can be key as part of a systems approach to solving workplace wellness challenges.

According to Gallup, 51% of the general population is particularly concerned about their exposure to bacteria when using office equipment. Gallup also reports that 89% of consumers are currently using at least one antimicrobial or antibacterial product on a regular basis. Employees are actively seeking cleaner products as part of their everyday lives, and will expect efforts to create cleaner workspaces from their employers.

Microban's patented and effective antimicrobial technology has been specially formulated for office equipment – it does not wash off or wear away. The technology is registered with the Environmental Protection Agency (EPA) for these particular uses and has a long history of safe and effective use.

*Antimicrobial technology is not designed to replace normal cleaning practices but rather complements normal cleaning in the fight against bacteria.

A GLOBALLY RECOGNIZED BRAND

Microban International is the global leader in built-in antimicrobial and odor control technology. Microban technology helps prevent problems before they start and can be found in thousands of commercial and consumer products worldwide, including kitchen fixtures, food storage products, personal care items, surgical drapes, flooring, cleaning tools and more.

Microban antimicrobial technologies can be found in many Fellowes products, including:

- Keyboard Managers
- Wrist & Palm Supports
- Back Supports
- Footrests
- Keyboards & Mice
- Sit-Stands

FREQUENTLY ASKED QUESTIONS

What is Microban antimicrobial product protection?

- Microban technology is built-in antimicrobial protection that gives products an added level of protection against microbes such as stain and odor causing bacteria, mold and mildew.

How do products with Microban antimicrobial protection work?

- Microban protection inhibits the growth of microorganisms. When microbes come in contact with the product surface, Microban protection penetrates the cell wall of the microorganism and disrupts cell functions making the microorganism unable to function, grow and reproduce.

What benefit do I get from products with Microban antimicrobial protection?

- Microban protection continuously fights the growth of microbes such as odor and stain causing bacteria. Microban protection makes products easier to clean and keeps them cleaner between cleanings.

What types of microorganisms does Microban protection work against?

- Microban antimicrobial protection is effective against most common bacteria, mold and mildew that cause stains, odors and product degradation. Microban technology is not designed to protect users from disease.

How do I know that Microban antimicrobial product protection is safe to use?

- Microban technology has undergone extensive independent laboratory testing and has a long history of safe use. It is registered with the EPA and other regulatory agencies in other countries for all applications in which it is used. Microban additives can be found in leading consumer and industrial brands around the world.
